

# W9145 SERIES

## 15-MEMORY TONE/PULSE DIALER WITH LOCK AND HANDFREE FUNCTIONS

### GENERAL DESCRIPTION

The W9145 series are Si-gate CMOS ICs that provide the necessary signals for either pulse or tone dialing. The W9145 series feature a key tone function, handfree dialing, a lock function, thirteen 16-digit automatic dialing memories, and two by 32-digit for redial and save memory.

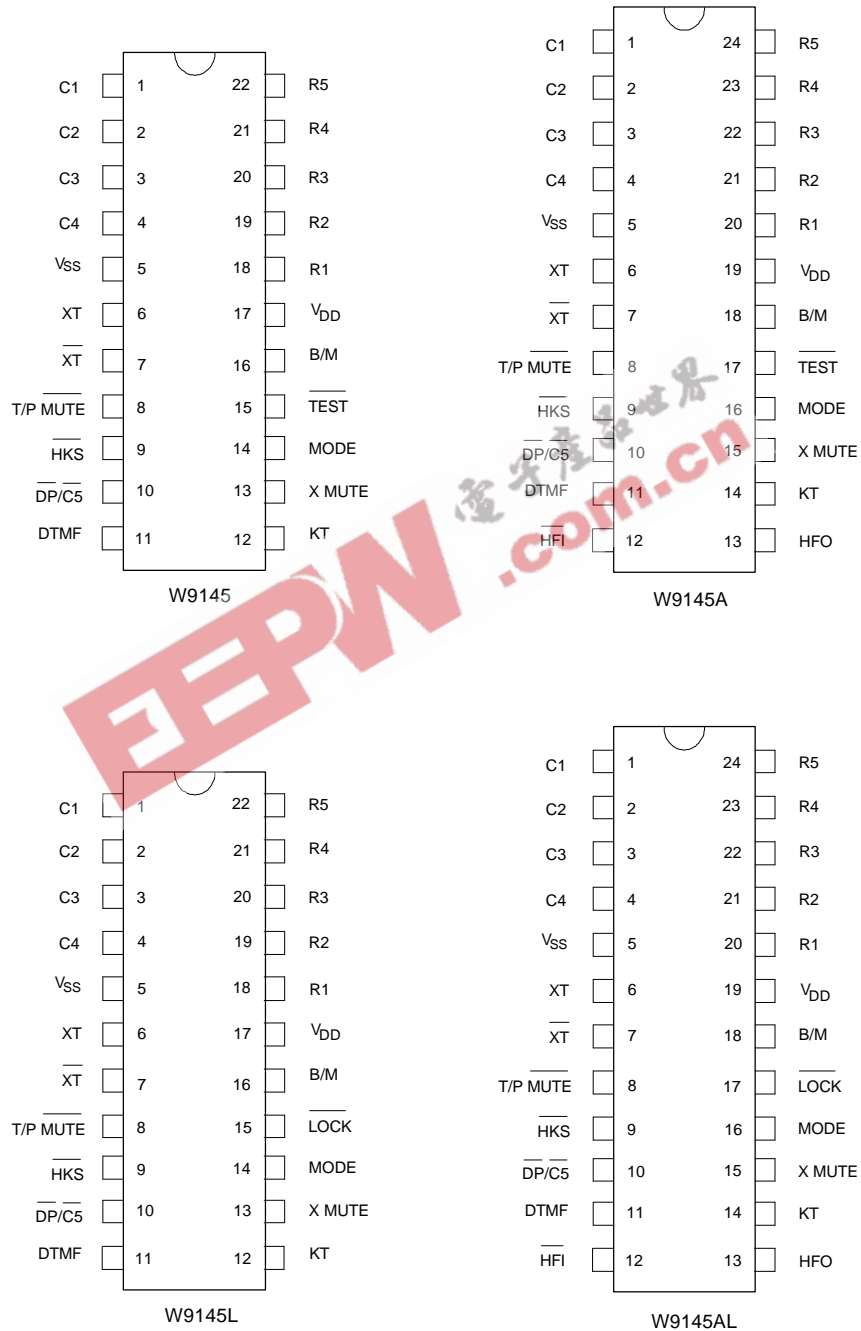

### FEATURES

- DTMF/Pulse switchable dialer
- Two by 32 digits for redial and save memory
- Three by 16 digits for one-touch direct repertory
- Ten by 16 digits for two-touch indirect repertory
- Unlimited dialing length (redial inhibited if dialing length exceeds 32 digits in normal dialing)
- Auto Pause Access for PBX and toll service operations (3.1 seconds per pause)
- Easy operation with redial, store, auto and pause keypads
- Key tone output for recognition of valid keypad entry
- Call disconnect (CD) key for line break operation
- Mute key for speech mute
- Flash time: 98 mS, 305 mS or 600 mS
- Minimum tone output duration: 93 mS
- Minimum intertone pause: 93 mS
- 0 or 9 dialing inhibition pin for PABX system or long distance dialing lock out
- Automatic switching from pulse mode to tone mode by \*/T key operation
- Break/make ratio pin selectable
- Uses Form A keyboard or standard 5 × 5 matrix keyboard
- Uses inexpensive 3.579545 MHz television color-burst crystal
- Internally generated power-on reset
- Packaged in 22/24-pin DIP
- The different dialers in the W9145 series are shown in the following table:

TYPE NO.	PULSE (pps)	FLASH	B/M	HANDFREE	LOCK
W9145	10	98/305/600	Pin	No	No
W9145A	10	98/305/600	Pin	Yes	No
W9145L	10	98/305/600	Pin	No	Yes
W9145AL	10	98/305/600	Pin	Yes	Yes

### PIN CONFIGURATIONS

# W9145 SERIES

## PIN DESCRIPTION

## W9145 SERIES

SYMBOL	22-PIN	24-PIN	I/O	FUNCTION
Column-Row Inputs	1-4 & 18-22	1-4 & 20-24	I	Keyboard inputs may be connected to either a standard keyboard, an inexpensive signal contact (Form A) keyboard, or electronic input from a $\mu$ C. A valid key entry is defined by a single row being connected to a single column.
XT, $\overline{\text{XT}}$	6, 7	6, 7	I, O	A built-in inverter provides oscillation by means of an inexpensive 3.579545 MHz crystal or ceramic resonator.
$\overline{\text{T/P MUTE}}$	8	8	O	The T/P $\overline{\text{MUTE}}$ is a conventional CMOS inverter that pulls to VDD in the absence of keypad input and pulls to VSS when an address keypad entry is sensed (excluding the * and # keypads in pulse mode). When any keypad in row 5 and column 5 is pushed, the mute out remains at high level.
MODE	14	16	I	Pull to VSS to enable tone mode. Pull to VDD to enable pulse mode (10 ppS).
$\overline{\text{HKS}}$	9	9	I	Hook switch input. When pulled to high, chip is in on-hook state (no operation). When pulled to low, chip is in off-hook state (enabled for normal operation). This pin is pulled to VDD by internal resistor. Note: This pin operates in conjunction with the handfree control pins; for further information see description of handfree control pins below.
B/M	16	16	I	B/M = 1: Break/Make ratio is 60:40. B/M = 0: Break/Make ratio is 67:33. This pin has no function in tone mode.
VDD, VSS	17, 5	19, 5	I	Power input pins.
X MUTE	13	15	O	The X MUTE is a conventional CMOS inverter that in tone mode is active while a DTMF signal is being transmitted. In pulse mode, this output remains low at all times.

## BLOCK DIAGRAM

## FUNCTIONAL DESCRIPTION

### Keyboard Operation

C1	C2	C3	C4	$\overline{DP/C5}$	
1	2	3	M1	MUTE	R1
4	5	6	M2	CD	R2
7	8	9	M3	F1	R3
*/T	0	#	SAVE	F2	R4
RD	S	A	P	F3	R5

- MUTE: Mute key
- CD: Call Disconnect
- \*/T: \* & P→T key
- RD: One-key Redial
- S: Store
- A: Auto dialing
- P: Pause
- M1 to M3: Memory 1 to 3
- SAVE: Save Memory
- F1, F2, F3: 98/305/600 mS

### Normal Dialing

$\overline{\text{OFF HOOK}}$  (or  $\overline{\text{ON HOOK}}$  &  $\overline{\text{HF1}} \overline{\text{i0}}$ ),  $\text{D1}$ ,  $\text{D2}$ , ...,  $\text{Dn}$

1. D1, D2, ..., Dn will be dialed out.
2. Dialing length is unlimited, but redial is inhibited if length oversteps 32 digits.

### Redialing

1.  $\overline{\text{OFF HOOK}}$  (or  $\overline{\text{ON HOOK}}$  &  $\overline{\text{HF1}} \overline{\text{i0}}$ ),  $\text{D1}$ ,  $\text{D2}$ , ...,  $\text{Dn}$ , BUSY  $\overline{\text{RD}}$ 
  - a. The one-key redialing function timing diagram is shown in Figure 4.
  - b. Once dialing of  $\text{D1}$  to  $\text{Dn}$  is finished, pressing  $\overline{\text{RD}}$  key will cause the pulse output pin to go low for 2.2 seconds break time and 600 mS pause will automatically be added.
  - c. If the pulses of the dialed number  $\text{D1}$  to  $\text{Dn}$  have not finished, the  $\overline{\text{RD}}$  key will be ignored.
2.  $\overline{\text{OFF HOOK}}$ ,  $\text{D1}$ ,  $\text{D2}$ , ...,  $\text{Dn}$  BUSY, Come  $\overline{\text{ON HOOK}}$ ,  $\overline{\text{OFF HOOK}}$   
(or  $\overline{\text{ON HOOK}}$  &  $\overline{\text{HF1}} \overline{\text{i0}}$ ),  $\overline{\text{RD}}$

## W9145 SERIES

Or ( **ON HOOK** &  **$\overline{\text{HF}}\overline{\text{I}}\overline{\text{O}}$**  ), **D1** , **D2** , ..., **Dn** , **BUSY**,  **$\overline{\text{HF}}\overline{\text{I}}\overline{\text{O}}$**  , Come  
 **$\overline{\text{HF}}\overline{\text{I}}\overline{\text{O}}$**  , **RD**

If **RD** is the first key after off-hook, only the redialing function will be executed and the pulse output pin will not go low for the break time of 2.2 seconds.

### Access Paus

**OFF HOOK** (or **ON HOOK** &  **$\overline{\text{HF}}\overline{\text{I}}\overline{\text{O}}$**  ), **D1** , **D2** , **P** , **D3** , ..., **Dn**

1. The pause function can be stored in memory.
2. The pause function may be executed in normal dialing, redialing, or repertory dialing.
3. The pause function timing diagram is shown in Figure 5.

### Pulse-to-tone (\*/T)

**OFF HOOK** (or **ON HOOK** &  **$\overline{\text{HF}}\overline{\text{I}}\overline{\text{O}}$**  ), **D1** , **D2** , ..., **Dn** , **\*/T** ,  
**D1'** , **D2'** , ..., **Dn'**

1. If the mode switch is set to pulse mode, then the output signal will be:  
D1, D2, ..., Dn, Pause (3.1S) D1', D2', ..., Dn'.  
(Pulse) (Tone)
2. If the mode switch is set to tone mode, then the output signal will be:  
D1, D2, ..., Dn, \*, D1', D2', ..., Dn'  
(Tone) (Tone) (Tone)
3. The device can be reset to pulse mode only by going on-hook; device remains in tone mode when the digits have been dialed out.
4. The **P→T** function timing diagram is shown in Figure 6.

### Flash

**OFF HOOK** (or **ON HOOK** &  **$\overline{\text{HF}}\overline{\text{I}}\overline{\text{O}}$**  ), **F**

1. Flash key cannot be stored as a digit in memory. Flash key has first priority among keyboard functions.
2. The system will return to the initial state after the break time is finished.
3. The flash function timing diagram is shown in Figure 7.

## Number Store

1.  (or  &  ),  ,  , ...,  ,  ,  ,

(or  )  (or  &  )

- The dialing of D1, D2, ..., Dn must be finished before S key may be pressed.
- D1, D2, ..., Dn will be stored in memory location Mn or Ln and then dialed out.
- Mn = M1 to M3; Ln = 0 to 9, \*, Pause.

2.  (or  &  ),  ,  ,  , ...,  ,  ,

(or  )  (or  &  )

- D1, D2, ..., Dn will be stored in memory location Mn or Ln but will not be dialed out.
- and  keys can be stored as a digit in memory. In store  is the pause mode,  function key.
- The store mode is released once the store function is completed or the state of the hook switch changes.

## Repertory Dialing

1.  (or  &  ),

2.  (or  &  ),  ,

## Save Key

1.  (or  &  ),  ,  , ...,

If the dialing  to  is finished, pressing the SAVE key will cause D1 to Dn to be of duplicated to the SAVE memory.

2.  Come  ,

to  will be dialed out after the SAVE key is pressed.

## Call Disconnect

The DP/C5 pin will go low (line break) when the CD key is pressed and the system will be reset to initial state.

## Mute Key

The mute output will be switched on as long as the MUTE key is depressed.

# W9145 SERIES

**CD** and **MUTE** key function timing diagram is shown in Figure 8.

## Mixed Dialing

**OFF HOOK** (or **ON HOOK** &  $\overline{\text{HFI}}\overline{\text{IO}}$  ),

1. **Normal dialing** + **Repertory dialing** + **Normal dialing**
2. **Repertory dialing** + **Normal dialing** + **Repertory dialing**
3. **Redialing** + **Normal dialing** + **Repertory dialing**
  - a. Redialing and SAVE dialing are valid for first key-in only.
  - b. The second sequence should not be performed until the first sequence is dialed out completely.

## ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	RATING	UNIT
DC Supply Voltage	VDD-VSS	-0.3 to +7.0	V
Input/Output Voltage	VIL	VSS -0.3	V
	VIH	VDD +0.3	V
	VOL	VSS -0.3	V
	VOH	VDD +0.3	V
Power Dissipation	PD	120	mW
Operating Temperature	TOPR	-20 to +70	°C
Storage Temperature	TSTG	-55 to +150	°C

Note: Exposure to conditions beyond those listed under Absolute Maximum Ratings may adversely affect the life and reliability of the device.
