DESCRIPTION

The WD1510 is an MOS/LSI Memory Buffer which is organized as a 9-bit by 128 or 132 word stack. The chip has 2 bidirectional data ports and may be read from or written into either port. Thus, the chip can function as a LIFO from either port or it can function as a FIFO, with data flow from either port A to port B or vice versa. The DIRECTION input pin is used to specify the data flow direction. The WD1510 is fabricated in 5-volt only N-channel technology.

OPERATION

The WD1510 contains a 132 x 9 buffer which may be programmed for 128 x 9 operation. Setting the 128/132 pin to a Logic 0, enables the EMPTY and FULL lines to be activated when 128 bytes are read or written. When the 128/132 line is set to a Logic 1 or left open, the 132 byte operation is enabled. This line contains an internal pull-up resistor of approximately 5KΩ.

When the Master Reset Line (pin 5) is set to a Logic 1, all internal counters are reset and the EMPTY Flag is set. Prior to reading or writing data, the DIRECTION Line (pin 25) must be set to select the desired operation:

DIR	PORT A	PORT B
1	WRITE	READ
0	READ	WRITE

To operate the device in the FIFO mode, both Ports must be used. If the DIRECTION Line is set to a logic 1, then data is written into Port A and read out of Port B. Reading/Writing to the two ports can be done asynchronously.

In the LIFO mode only one port is used. For example, if using Port A, the DIRECTION Line is set to a Logic 1 to enter data, and is reset to a Logic 0 to read data.

Reading or writing is performed by setting the appropriate CS (Chip Select) Line to a Logic 0. After the specified hold time has expired, data may be entered or read on the rising edge of CSA or CSB. In a Read mode, data is valid as long a CS remains active. Both Ports return to the high impedance state when CS is returned to a Logic 1.

The EMPTY Line (Pin 2) and the FULL Line (Pin 28) are used as status or interrupt lines to determine the status of the buffer. When both EMPTY and FULL are at a Logic 0, the buffer contains 1 thru 127 bytes (128/132 = 0) or 1 thru 132 bytes (128/132 = 1).
